

CineWave Entertainment

Data Model & Entity Specifications

1. Reusable Data Objects (US-005)

Independent reusable data objects separate enterprise movie and schedule metadata from transactional case instances, allowing multi-case consistency:

Data Object	Properties	Description & Constraints
Movie	• Movie Name (Text) • Genre (Text)	Maintains master catalog of movies screened across theatres.
Show	• Show Date (Date) • Show Time (Text) • Seat Capacity (Integer)	Encapsulates schedule timing and total auditorium seating limit.

2. Case Type Data Dictionary (`Movie Ticket Request`)

Property Name	Type	Definition / Business Rule
Movie Name	Text	User-selected film title
Show Date	Date only	Date of the scheduled show
Show Time	Text	Time slot of the show
Ticket Price	Currency	Price per individual ticket
Number of Tickets	Integer	Quantity requested (validated > 0)
Total Cost	Currency (Calculated)	Formula: .TicketPrice * .NumberOfTickets
Seat Availability Status	Picklist	Values: Available, Unavailable
Available Seats Count	Integer	Remaining seats in auditorium
Booking Status	Picklist	Values: Pending, Confirmed, Cancelled
Booking Confirmation Status	Text	Status flag post-seat allocation
Seat Numbers	Text	Assigned seats (e.g. B14, B15)
Ticket ID	Text	System-generated ticket code
Show Type	Picklist	Values: Premium, Standard (drives routing)
